WINTER

COLLECTION 2026/2027

CHALLENGE. EVERY DAY.

collection 2026/2027

Born in the heart of Europe in 1947, Alpina emerged from small shoemaking workshops nestled in the Alps, founded on a simple belief – that every step should feel natural, strong, and free. Over the decades, that belief has grown into a legacy. Today, Alpina is a symbol of superb European craftsmanship and innovation in active footwear.

From the icy peaks of world-class ski slopes to the rhythm of everyday life, Alpina creates footwear for those who move – for those who live actively, explore boldly, and value comfort as much as performance. Our shoes are trusted by Olympic champions and elite athletes, whose pursuit of excellence inspires everything we do. Each pair is crafted with precision, using carefully selected materials, advanced ergonomic design, and deep knowledge of how the foot moves – turning decades of experience into effortless comfort and superior performance. But Alpina isn't only about winning medals. It's about the quiet joy of a perfect stride, the freedom of movement, and the confidence to go further – whether on snow, trail, or city street.

With a proud heritage, countless design awards, and a growing presence across Europe, the Americas, and Asia, Alpina continues to shape the future of active footwear – one step at a time.

FEATURES

WIDTH

Boot width, or last width, refers to the measurement across the widest part of the forefoot. It determines how snugly or loosely the boot fits around the foot. Narrow widths provide a tighter, performance-oriented fit, while wider widths offer more room for comfort.

MEDIUM
- Suitable for a wide range of foot shapes.
- Balanced comfort and control for versatile skiing.
- Ideal for skiers who want both performance and comfort.

NARROW
- Superior control and stability for advanced outdoor enthusiasts.
- Reduces internal foot movement for a more connected feel.
- Ideal for pople with narrow feet or seeking a high-performance fit.

WIDE
- Comfortable fit for wide feet, reducing pressure points.
- Allows more natural foot movement without sacrificing stability.
- Ideal for recreational skiers or those needing extra foot space.

VOLUME

Boot volume describes the overall space inside the boot, including both the width and height of the instep and the room around the foot. Low-volume boots fit more snugly for precise control, while high-volume boots provide more space for comfort, especially for those with larger or higher-arched feet.

HIGH
- Maximum comfort for wider or higher-volume feet.
- Reduces pressure points and fatigue on longer trips.
- Ideal for outdoor enthusiasts who prioritize comfort over high performance.

LOW
- Enhanced foot control for advanced skiers.
- Improved power transfer for precise movement.
- Ideal for people with narrow feet or seeking a tight, responsive fit.

MEDIUM
- A balance of comfort and control for varied terrain.
- Suitable for most foot shapes.
- Ideal for intermediate users or those seeking all-day comfort.

FIT

The right fit enhances your experience by providing the appropriate level of comfort, support, and control based on your activity style and level. Whether you prefer the relaxed feel of Comfort boots, the balanced support of Fitness boots, or the precise fit of Performance boots, selecting the right fit ensures you get the most out of your footwear.

COMFORT
- Extra comfort for outdoor enthusiats with wide feet.
- Reduces pressure and hotspots for prolonged comfort.
- Ideal for recreational use or those prioritizing comfort over precision.

FITNESS
- Comfortable fit for a wide range of foot shapes.
- Combines support with comfort for all-day use.
- Ideal for intermediate skiers or those seeking versatility.

PERFORMANCE
- Maximum control and precision for technical outdoor activities.
- Reduces foot movement for greater stability.
- Ideal for people with slim feet or seeking a race-like fit.

TECHNOLOGIES XC

BOA® FIT SYSTEM FEATURING LI2

The dual dial BOA® Fit System featuring Li2 provides precise, micro-adjustment for a secure and customized fit, even while on the move. Its low-profile design ensures a clean integration with cross-country boots, minimizing bulk and improving aerodynamics. The lightweight, durable BOA® Fit System evenly distributes pressure, enhancing performance and control during long sessions. Built to withstand harsh winter conditions, the Li2 platform offers multidirectional tightening and release, ensuring consistent performance and reliability in all snow environments. The two independent zones allow to customize the fit and adapt perfectly to every foot.

BOA® PERFORMFIT™ WRAP AND ALPINA ENGINEERING

The BOA® PerformFit™ Wrap, features an innovative panel structure that uniformly wraps over the midfoot and securely locks in the heel. This system delivers scientifically proven performance improvements – up to 10% greater power transfer, energy efficiency, stability, and control compared to traditional lacing, while reducing pressure points by over 14%. Alpina has adapted and implemented this system specifically for cross-country ski boots, following the highest engineering standards. The result is a precisely wrapping fit that secures the foot evenly, enhances heel lock and responsiveness, and ensures consistent comfort and efficiency across every stride.

RED DOT AWARD

Crafted with purpose. Awarded with pride. Alpina's innovative design and commitment to top-tier craftsmanship have been recognized with the prestigious Red Dot Award. This international seal of quality underscores Alpina's commitment to excellence, combining advanced technology, thoughtful ergonomics, and distinctive aesthetics to create products that excel in both performance and design.

VCP

VOLUME CONTROL PLATE: personalized Footwear Experience

Introducing Alpina's Volume Control Plate (VCP), an engineering marvel placed under the insole to fine-tune your boot's volume. Every foot is different, and the VCP allows you to customize the left and right foot independently. Adjust for a perfect fit that provides optimal comfort and support. If you need more space, removing the plate is easy. Experience a personalized fit with the VCP, designed to accommodate the unique shape of your feet.

NON PVC

Eco-Conscious Durability

At Alpina, we emphasize sustainability in every product. Our non-PVC cross-country boots are made from recycled polyester and TPU, materials that offer the same durability as PVC while being significantly more eco-friendly. Choosing these boots helps you reduce your ecological footprint and support our green initiatives. We proudly offer footwear that cares for both you and the planet.

ACTIVE GRIP

Enhanced Classic Skiing Experience

At Alpina, we understand that the Skate and Classic techniques require distinct connections between your feet and skis. For an optimal Classic technique experience, our solution, developed through decades of research, is the Active Grip technology. The 10 mm offset of the front metal bar on the Alpina PRO CLASSIC sole maximizes the efficiency of every kick. With Alpina Active Grip technology, you'll enjoy a superior Classic technique skiing experience like never before.

FREE HEEL TECHNOLOGY

Optimal Comfort and Performance for All Terrains
Extensive research and testing have shown that feet move uniquely during cross-country skiing and hiking, and our boots are designed to accommodate these movements. Alpina "Free-Heel" technology features a specially shaped heel counter, providing adventurers with maximum comfort and performance. This unique design and manufacturing process ensure your feet enjoy freedom and support at every moment, no matter the terrain.

VARIO

Our high-end models feature elastic tape inserts that allow the gaiters to adapt to a variety of lower leg shapes.

ULTRA LIGHT

Enhanced Racing Experience
Lightweight boots boost speed, agility, and energy efficiency. By reducing the weight of each step, they allow faster strides and better power transfer. Our commitment to creating the best and lightest XC racing boots is reflected throughout our entire collection, giving outdoor enthusiasts enhanced performance and endurance on every level.

MADE IN EUROPE

European Craftsmanship: handmade to the Highest Standards.
Crafted in Europe, our footwear represents the pinnacle of handmade production, demanding exceptional levels of craftsmanship and shoemaking expertise for unmatched quality.

CONSTRUCTION

We design boots tailored to the needs of skiers, varying construction for lightweight breathability for competitors and warmth and stability for back-country explorers, ensuring top performance for every user.

RACING ELITE

One-piece full-carbon chassis and cuff, split racing sole tip and heel glued to the chassis, anatomic, ultralightweight, and racy inner shoe, breathable, water-repellent, ultralight Alpina Elite Gaiter.
Lightweight performance: The full-carbon construction ensures maximum energy transfer and precision, making this ideal for competitive racers.
Comfort and fit: The anatomic inner shoe provides a snug, race-oriented fit for improved control and reduced fatigue.
Protection and breathability: The breathable and water-repellent Alpina Elite Gaiter keeps feet dry and comfortable, even in harsh conditions.

DUAL BOOT

Designed for young adventurers, this innovative two-part construction lets kids move comfortably on and off the tracks. The warm inner boot, featuring a soft fleece lining and a rubber-based sole, can be removed and worn independently for light walking from the cabin or car to the tracks and back. When placed inside the protective outer shell, it delivers the support and stability needed for skiing while guarding against snow, moisture, and cold conditions. The easy removable design makes transitions simple, keeping kids warm, dry, and ready for every winter adventure.

PRO SKATE X

Integrated sole and heel construction:
The heel and back part of the sole are made from a single piece, ensuring stability, durability, and optimal flex. This seamless design enhances power transfer and maintains precise control through every stride.
Optimized front interface:
The Rottefella front sole with the stiffer Skate X insert works perfectly with the PA-X Skate X heel counter, providing the ideal balance of rigidity and responsiveness for maximum skating performance.

PRO SOLE

Constructed on the sole instead of the chassis, equipped with Alpina PRO Soles, materials vary from full-carbon to TPU, optimized for performance.
Variety of performance options: With a range of materials, these boots cater to different performance needs at various price points, making them accessible to both competitive and recreational skiers.
Durability and support: ALPINA PRO SOLES offer durability while maintaining a strong connection between the skier and the snow for improved stability and power transfer.

TOURING PRIME

All Touring shoes use Alpina Touring Glued construction and combine Alpina or Roteffela outer soles. The specific of this glued construction is great comfort and isolation throughout everyday use while staying priceperformance oriented.
Enhanced comfort: The glued construction and integrated heel counter ensure that the boot feels comfortable even during extended use.
Insulation for warmth: The design provides effective insulation, making these boots ideal for everyday use in colder temperatures.
Durability for touring: This boot is designed for everyday use, offering a balance of comfort and functionality for touring skiers.

BC BOOTIE PRO

Full bootie construction with a 360° design, integrated TPU heel counter, water-repellent, breathable, and cold-insulated.
360° protection: The full bootie construction wraps the foot, offering complete protection against cold, moisture, and external elements.
Warmth and comfort: Excellent insulation ensures warmth, even in harsh winter conditions.
Breathability and water repellency: The breathable materials maintain foot comfort by preventing moisture buildup, while water repellency keeps feet dry.

BC PRIME

Constructed with multiple layers of carefully selected materials, stitched from the base inside out, with a heel counter, provides structure, insulation, water protection, and breathability.
Durable construction: The multi-layered materials offer a robust boot structure, perfect for backcountry conditions.
All-weather protection: Water protection and insulation ensure the foot stays warm and dry, making these boots great for off-trail exploration.
Breathable comfort: The breathable design prevents overheating, even during intense activity.

FLEX

Flex refers to how much a boot's sole bends, impacting performance across activities. A stiffer flex offers more support, ideal for skating and demanding terrains, while a softer flex allows a natural stride, perfect for classic skiing. Medium flex provides balance for backcountry and double poling, delivering both flexibility and control. Choosing the right flex enhances power, comfort, and stability for each specific technique.

SOFT

Graceful and Flexible
A soft flex sole is perfect for classic skiing. It offers a smooth, forgiving stride, making it easy to handle various terrains. This design provides comfort and precise control for cross-country skiers as they glide through snow effortlessly.

MEDIUM

Adaptable and Versatile
Medium flex soles are perfect for outdoor adventures and double-poling techniques. They offer the right balance for cross-country skiing, allowing you to tackle diverse terrains with ease while maintaining speed and control on trails.

STIFF

Solid and Powerful
A stiff flex sole is essential for skating techniques. It provides the rigidity and responsiveness needed for efficient, forceful strides, giving skaters the foundation to maximize performance and speed on the snow.

PERFORMANCE XC

CUFFS

Cross-Country Skiing Ankle Support

Cross-country skiing requires different levels of ankle support. Skating demands strong lateral support for maximum performance, while classic skiing benefits from ankle flexibility. Combi boots offer versatility for both techniques, with ergonomically designed cuffs providing a balance of rigidity and comfort, ensuring optimal performance across various skiing styles.

ELITE RS

Material: TPU and Carbon
Designed for rollerskiing, this full carbon cuff is lightweight and offers maximum stiffness for quick lateral movements. EVA padding ensures comfort, and the power strap provides an adjustable, secure ankle grip for high performance.

ELITE SKATE/ DUATHLON

Material: Full Carbon
The full carbon cuff is ultra-lightweight, providing maximum stiffness and lateral responsiveness for superior skating performance. EVA padding ensures all-day comfort, and the power strap offers a customizable fit with excellent ankle grip.

PA-X

Material: PA12 and Carbon Fiber
The combination of PA12 and carbon fibers reduces overall weight while enhancing strength, durability, and responsiveness. The advanced PA-X cuff delivers superior torsional stability and promotes an optimal skiing stance for precise control and maximum performance.

PRO SKATE/ DUATHLON

Material: Pebax and Carbon
The combination of PEBAX and carbon reduces the boot's weight, enhancing functionality and durability. The solid PRO Cuff delivers better torsional stability and an improved stance for optimal skiing posture.

PRO JUNIOR SKATE/ DUATHLON

Material: TPU and Carbon
TPU and carbon construction make the boot lighter and more durable. The solid PRO Cuff provides young skiers with better torsional stability and a secure stance for developing skills.

RACE

Material: TPU and Glass-Fiber
TPU and glass-fiber construction lightens the boot while increasing its functionality and durability. The solid RACE Cuff enhances torsional stability, ensuring better posture and stance for effective power transfer.

TEMPO

Material: TPU
Thermoplastic polyurethane (TPU) provides good stiffness and lateral stability, while the EVA padding and a power strap provide superior comfort and adjustable ankle grip.

HEEL COUNTERS

The heel counter is a critical component for boots, providing essential support for the heel and ankle. It ensures the foot remains in place during skiing, improving control, and performance, and preventing injuries.

ELITE SKATE CHASSIES

Material: Full Carbon
The Elite SKATE chassis, featured in World Cup-level boots, is a single-piece full carbon construction that integrates the sole and heel counter. It provides unmatched torsional stability, improving power transfer and reducing the risk of injuries. The ultra-lightweight design, combined with FREE-HEEL construction, adapts to various heel and foot shapes for personalized comfort and reduced heel pressure.

CLASSIC CHASSIES

Material: Full Carbon Designed for World Cup racing, the Elite CLASSIC chassis is a single-piece full carbon construction, providing superior torsional stability and power transfer. The FREE-HEEL construction reduces heel pressure and adapts to different foot shapes, offering a custom fit and reducing injury risk for classic skiing.

PA-X SKATE

Material: PA12 and Carbon Fiber
The PA-X heel counter, made from PA12 reinforced with carbon fibers, provides exceptional lightness, strength, and torsional stability. The Free Heel construction allows natural movement and adaptability around the back of the heel, ensuring a secure fit and increased comfort during dynamic skating performance.

ALPINA PRO SKATE

Material: Carbon
The PRO SKATE heel counter is made entirely of carbon, providing lightweight and torsional stability. The FREE-HEEL system adapts to different heel and foot shapes, offering a secure fit and reducing pressure during high-intensity skating.

PRO CLASSIC	Material: Carbon and TPU The injected carbon heel counter is solid and durable. It ensures better torsional stability and stance position. 'Free heel' provides a good grip for any heel or foot shape.
COMP CLASSIC	Material: TPU Premium thermoplastic polyurethane heel counter, with high level of stiffnes and low weight provides a good grip and a stable foothold in the heel. 'Free heel' construction adapts to the various foot shapes and heel volumes.
COMP SKATE	Material: Carbon and Pebax Reaching for the best and lightest, but wishing to be more accessible to a wider range of consumers. It still offers lightweight construction, and gives you high performance, functionality, and durability. 'Free heel' provides a good grip for any heel or foot shape.
RACE SKATE/ CLASSIC	Material: TPU and Glass-Fiber Premium thermoplastic polyurethane heel counter with glass-fibre, with high level of stiffnes and low weight provides a good grip and a stable foothold in the heel. 'Free heel' construction adapts to the various foot shapes and heel volumes.
TEMPO SKATE/ COMBI	Material: TPU Thermoplastic polyurethane heel counter provides a good grip and a stable foothold in the heel.
THERMO MOLDED	Material incorporated within the heel section of the boot's construction to enhance fundamental stability
THERMO MOLDED BC	Premium thermo-molded material strategically integrated into the heel and ankle areas of the boot's structure. This innovation is designed to significantly bolster core stability, ensuring your confidence and support on challenging terrains.

MIDSOLES

Midsoles define the shoe's flex, feel, and power, helping you reach speed while staying stable. They enhance control in classic technique and deliver power in sprints. Different materials and shapes ensure the perfect performance for each shoe.

	MATERIAL	STIFFNES	WEIGHT
ELITE SKATE	CARBON AND PEBAX (WORLD CUP TECHNOLOGY)	HARD	ULTRA LIGHTWEIGHT

PERFORMANCE XC

OUTSOLES

Outsole type and construction are chosen individually for each boot based on its features and functional requirements. We have used years of experience and knowledge from our R&D department and years of collaboration with World cup athletes to develop Alpina outsoles for both Skate and Classic techniques with specific characteristics. We are happy to choose the best options for every shoe.

75 MM

Material: TPU
Standard 75 mm sole; provides excellent support in rugged terrain; non-slip profile with specially made rubber mixture. Tourer free 75 and Alaska 75 use Vibram brand soles.

ALPINA DYNO-PLATE

Material: PEBAX + Carbon Fibers
DYNO-PLATE is an injection-molded plastic panel designed for a high dynamic response to bending. To keep the plate thin and lightweight, carbon fibers are added, further enhancing its flexibility and responsiveness. This blend of plastic and carbon fiber has proven to be the ideal combination for achieving maximum dynamic response. DYNO-PLATE panels are integrated into both the ALPINA PRO CLASSIC and ALPINA PRO SKATE outsoles, significantly boosting the dynamic performance and responsiveness of each stride in both SKATE and CLASSIC ski boots.

ALPINA ELITE CLASSIC CHASSIS

With integrated split Classic sole
Material Chassis: Full Carbon
Material Sole: TPU
Extremely light anatomic and ergonomic single-piece carbon-made soft, pliable sole flex chassis construction with directly integrated NNN compatible Classic toe & heel plate. The chassis construction provides maximum longitudinal stability, superior responsiveness, and power transmission by the foot to the ski, with “FREE– FEET” & adaptable heel pocket construction for minimum heel stress and optimal foot fit.

With integrated split Skate sole
Material Chassis: Full Carbon
Material Sole: TPU
Extremely light anatomic and ergonomic single-piece carbon-made stiff sole flex chassis construction with integrated NNN compatible Skate toe & heel plate. The chassis provides maximum longitudinal stiffness and lateral stability, superior lateral responsiveness, and power transmission by foot to the ski, with “FREE–FEET” & adaptable heel pocket construction for minimum heel stress and for optimal foot and ankle fit.

ALPINA ELITE SKATE X

Material Chassis: Full Carbon
Material Sole: TPU
Rottefella SkateX: Precision Design for Enhanced Performance Engineered specifically for skate skiing, Rottefella's SkateX introduces a groundbreaking system that surpasses the traditional NNN binding. Featuring a reinforced carbon fiber chassis, it delivers superior lateral stability and balance. Optimized for efficient energy use, the SkateX system ensures smooth, powerful strides, making it ideal for high-performance skating on demanding courses.

ALPINA PRO CLASSIC ACTIVE GRIP

Material: TPU
The specially designed sole for classic skiing features an NNN-compatible pivot point shifted 10 mm forward for a more efficient and powerful push-off, improving ski-to-snow contact. The thin-layer construction ensures a lightweight sole, while the low heel and 90-degree forefoot design provide optimal soft flex for enhanced comfort and performance.

ALPINA PRO SKATE

Material: TPU
The specially designed outsole for skate skiing features a thin-layer construction for a lightweight feel, along with a high heel and 45-degree angled forefoot for optimal stiff flex. The NNN-compatible pivot point is slightly repositioned under the big toe, enhancing efficiency and delivering a stronger, more precise push-off.

ALPINA PULSE 1.0

Material: TPU
PULSE soles are designed to fit the NNN system, ensuring compatibility with cross-country ski bindings. Their neutral design, balancing the height of the heel in relation to the metatarsal or forefoot, provides excellent stability and a well-balanced stance. The large walking surface enhances control and support, making them ideal for both diagonal and gliding cross-country skiing techniques.

ALPINA PULSE 2.0

Material: TPU
PULSE 2.0 outsoles upgrade the functionality of the previous generation. They maintain the neutrality of the design in terms of their universality or suitability for both diagonal and skating running techniques on the one hand, while on the other hand they offer improved functionality in terms of flex and flexural strength. The walking surface remains large, allowing a firm stride both on and off skis.

BC XPLORE

Material: TPU + rubber
Rottefella Xplore Off-Track: Stability and Ease in Challenging Terrains. Master backcountry terrains with the
Rottefella Xplore Backcountry Off-Track system, designed for exceptional stability and mobility. The relocated
rotation point, wider interface, and innovative SpringPin technology facilitate smoother transitions and reduce snow buildup. Equipped with a 36 mm heel lifter for easier uphill movement, this binding is perfect for boots integrated with the Xplore system.

PRO SKATE X

Material: TPU
The PRO SKATE X outsole is crafted from high-performance TPU in a two-part construction. Designed to work seamlessly with the Skate X binding system, it combines a stable rear section for durability and control with a responsive front zone for precise power transfer. The result is a perfectly tuned flex pattern that enhances ski-to-snow connection, efficiency, and skating performance.

ROTTEFELLA BC

Material: TPR
Rottefella NNN BC: Rugged Design for Demanding Conditions. Designed for the backcountry, Rottefella's NNN BC is a durable and wider version of the regular NNN, tailored for challenging environments. Made of lightweight TPU, it offers excellent support and reliable traction with its aggressive tread pattern, ideal for snow, ice, and slippery surfaces.

ROTTEFELLA T4

Material: TPU
Efficient and Reliable ROTTEFELLA T4 Ski Sole. The ROTTEFELLA T4 sole, made from thermoplastic polyurethane, combines lightness with durability and cold resistance, enhancing cross-country skiing performance. Its flexibility allows for efficient strides and strong grip on various surfaces, suitable for skiers from beginners to experts.

COMFORT XC

GAITERS

Gaiters cover the lower leg entirely and protect against cold, water, moisture, and snow. Gaiters are elastic and adaptable in the shoe instep to different foot shapes. On the one hand, gaiters are water-tight, but on the other hand, they are also breathable in the instep area of the shoe.

ELITE GAITER

Material: Polyester and TPU foil
Ultralight thin-layer elastic Polyester-made gaiters combine breathability and water tightness. It improves the lightness of the shoe. The inside side is equipped with thin PU foil to prevent water and moister penetration and absorption, while the instep area is free of any foil to ensure breathability. Gaiters are equipped with elastic tape for gaiter adaptability to various lower leg shapes.

PRO

Material: Technical Textile (Non-PVC)
The gaiter is made from a high-elastic, non-PVC technical fabric, making it environmentally friendly while maintaining top performance. An elastic collar band ensures a secure fit, while dual protective foils provide targeted protection – a durable, abrasion-resistant layer on exposed areas and a transparent, waterproof barrier to prevent moisture intrusion.

PULSE

Material: PVC and Neoprene
Made out of PVC, it enables strength, lightweight, elasticity, and high durability, while NEOPRENE maintains good flexibility over a wide temperature range and offers good insulation against both wet and cold.

4DRY

4DRY stands for an innovative system made from bi-elastic PES textile material laminated with a membrane that allows the boot water impermeable and allows it to breathe. The material feels light and is hydrophobic, whisking away water and moisture to maximize comfort and ensure a dry and warm foot.

MEMBRANES

Alpina membranes are designed to keep your feet dry, warm, and comfortable in any weather condition. Whether you're skiing through deep powder or skating on groomed trails, Alpina membranes will help you stay protected from the elements. They are also lightweight and durable. This makes them a good choice for winter cross- and back-country boots, as they won't add too much weight to your boots and they will last for many seasons.

IGLOO

Material: Felt
Advanced use of insulation provides the foot with maximum thermal comfort.

MEMBRANE

Material: PU Membrane
The Alpitex membrane provides additional protection against water and moisture, which increases comfort, even in more extreme weather conditions.

THINSULATE INSULATION

"Thinsulate" insulation provides up to twice as much thermal shoe insulation. It provides the foot maximum thermal comfort even under icy and high-humidity conditions.

LACING

Alpina offers two unique lacing systems for cross-country and backcountry boots: Diamond Lacing and Prime Lacing. Both systems are designed to improve torsional stability and power transfer, but they have slightly different characteristics. Alpina Diamond Lacing and Prime Lacing are two unique lacing systems that offer improved torsional stability and power transfer for cross-country and backcountry boots. The best lacing system for you will depend on your individual needs and preferences.

DIAMOND LACING A braid angle of 45° relative to the longitudinal direction of the shoe improves the torsional stability of the soft part of the shoe. This ensures a tight fit between the shoe and the foot in the rotation phase of the shoe toward the inner side when skiing the skating technique. It also improves the torsional stability of the overall shoe and helps deliver power to the user.

PRIME LACING A braid angle of 90° relative to the longitudinal direction of the shoe provides maximum grip in the instep and ensures a tight fit between the boot and the heel when skiing the classical technique.

BOA® FIT SYSTEM FEATURING LI2 The dual dial BOA® Fit System featuring Li2 provides precise, micro-adjustment for a secure and customized fit, even while on the move. Its low-profile design ensures a clean integration with cross-country boots, minimizing bulk and improving aerodynamics. The lightweight, durable BOA® Fit System evenly distributes pressure, enhancing performance and control during long sessions. Built to withstand harsh winter conditions, the Li2 platform offers multidirectional tightening and release, ensuring consistent performance and reliability in all snow environments. The two independent zones allow to customize the fit and adapt perfectly to every foot.

FOOTBEDS

Footbeds are vital for both cross country and backcountry activities. They optimize the foot-chassis connection, enhancing stability, comfort, and performance.

ORTHOLITE Alpina OrthoLite® insole technology creates a thermal barrier that elevates footwear temperature regulation to an unprecedented level, infusing open-cell PU foam with a proprietary aerogel creating the lightest, most advanced version of the world's most insulative material delivering unmatched thermal insulation and all-day comfort and cold weather protection underfoot.

COMP Introducing the ALPINA COMP footbed, engineered to elevate your outdoor experiences. Crafted with precision, this footbed features open-cell PU foam, which not only provides exceptional cushioning but also enhances breathability, ensuring your feet stay fresh throughout your adventures. The advanced insulation technology in the ALPINA COMP footbed offers reliable protection from the elements, keeping your feet warm in cold weather.

TOUR Anatomic insole contributes significantly to the vertical stability of the foot, providing a high level of comfort and improving the thermal insulation of the shoe, and keeping your feet dry.

side cut	NIS plate
80-58-69	**No**

The perfect choice for skiers who demand stability, control, and reliable edge grip in ungroomed terrain. Built with durable CAP construction and an ultralight wood core, this ski strikes a balance between strength and agility for versatile backcountry adventures. Full metal edges ensure dependable grip and control when descending or traversing steep slopes, while the camber design enhances flotation and maneuverability in variable snow conditions. The Multigrip embossed base provides lasting durability and efficient glide. Pre-mounted with the Rottefella Xplore binding system, this ski is ready for exploration.

The Discovery 68E is designed for balancing off-trail and groomed track skiing. Like the standard Discovery 68, its patterned base provides easy ascents, while the 68 mm width improves flotation in soft snow. Unlike a flat ski, it comes equipped with pre-mounted BC AUTO bindings and steel edges, offering enhanced control, durability, and confidence in variable snow conditions.

The Discovery 68E is a flat ski designed for balancing off-trail and groomed track skiing. Like the standard Discovery 68, its patterned base provides easy ascents, while the 68 mm width improves flotation in soft snow. Featuring steel edges, it delivers improved grip, stability, and control on icy or firm snow conditions. As a flat ski, the interface can be mounted for either telemark or NNN setups, making it versatile for different binding systems.

Alpina SPARK EL Junior skis are designed for young skiers who want to progress safely and confidently on snow. A child-specific geometry and softer flex allow for easy turn initiation and smooth, controlled skiing. U-Flex technology combined with the lightweight Synflex core provides greater flexibility and improved control, while the Early Rise Rocker profile enhances stability and maneuverability. The Full Power Cap construction ensures durability at a low weight, and the skis are additionally reinforced with fiberglass.The skis are supplied without mounted bindings — the bindings are delivered separately, ensuring a higher level of safety. Bindings must be mounted and adjusted by a certified technician, who will professionally set them according to the child's weight and skill level. This guarantees optimal safety and increased confidence on snow. The Tyrolia Junior binding allows for easy boot length adjustment and is compatible with GripWalk soles. An ideal choice for first skiing experiences and further technical development.

VCP

VOLUME CONTROL PLATE: personalized Footwear Experience
Introducing Alpina's Volume Control Plate (VCP), an engineering marvel placed under the insole to fine-tune your boot's volume. Every foot is different, and the VCP allows you to customize the left and right foot independently. Adjust for a perfect fit that provides optimal comfort and support. If you need more space, removing the plate is easy. Experience a personalized fit with the VCP, designed to accommodate the unique shape of your feet.

NON PVC

Eco-Conscious Durability
At Alpina, we emphasize sustainability in every product. Our non-PVC cross-country boots are made from recycled polyester and TPU, materials that offer the same durability as PVC while being significantly more eco-friendly. Choosing these boots helps you reduce your ecological footprint and support our green initiatives. We proudly offer footwear that cares for both you and the planet.

XFRAME

A rigid, lightweight structural frame connects the four main stress points and is reinforced on the most demanding axes, ensuring maximum strength and rigidity while reducing weight.

MADE IN EUROPE

European Craftsmanship: handmade to the Highest Standards.
Crafted in Europe, our footwear represents the pinnacle of handmade production, demanding exceptional levels of craftsmanship and shoemaking expertise for unmatched quality.

CUFF ALIGNMENT

A rigid, lightweight structural frame connects the four main stress points and is reinforced on the most demanding axes, ensuring maximum strength and rigidity while reducing weight.

PERFORMANCE ALPINE

CUFFS

AEROCORE

Alpina's shell and cuff construction uses optimized wall thickness and new high-strength plastic materials. It reduces weight while increasing strength and skiing performance, combining a sleek look with a light, powerful feel.

C3 - COMPLETE CONTROL CUFF

C3 – Tailored Comfort for Every Woman's Leg Shape
Our revolutionary C³ technology, the Complete Control Cuff, sets ALPINA apart as the world's first and only ski boot producer that has developed a system that allows women to adjust calf volume in a mere 5 seconds, without the need for any tools. While competitors offer limited adjustments with so-called spoilers, C³ technology stands out by providing an anatomical adjustment from the ankle area to the top of the boot for complete control over your comfort and volume.

DUO CUFF

The DUO Cuff provides a smooth, proper flex tailored for lightweight young skiers of varying heights, with reinforced areas ensuring stability. The progressive cuff design increases in support and stiffness as the boot size grows, offering the right level of flex for each stage of development.

E-CUFF

The E-CUFF is designed with ergonomics in mind, providing a flexible and adaptive fit. It is constructed from a softer material compared to the shell, allowing for easier adjustment and movement. The back of the cuff is lowered for a better ergonomic fit, particularly suited to the leg shape, enhancing comfort and control during skiing.

EASY ENTRY

The EASY ENTRY cuff construction features a two-part design that opens lengthwise, allowing for effortless foot entry, making it ideal for kids and beginners. With just one buckle and a strap, it offers a secure fit while maintaining simplicity and ease of use, ensuring comfort and convenience for those new to skiing.

FLEXXI BE3 CUFF

The new Flexxi Be3 technology allows for a better transfer of force to the ball of the foot, leading to improved control over vibrations and less stress on the knees, thighs and spine, and thus on the entire body. Due to the Flexxi 's composition, the foot is kept in motion, maintaining the heat inside the boot.

X-CUFF

The X-CUFF is made from a single piece of material, softer than the lower part for easier adjustment. The back of the cuff is lowered to provide a better ergonomic fit, especially suited to the male leg shape, ensuring comfort and flexibility during use.

SHELLS

AEROCORE SHELL

Alpina's shell and cuff construction uses optimized wall thickness and new high-strength plastic materials. It reduces weight while increasing strength and skiing performance, combining a sleek look with a light, powerful feel.

E-SHELL

The E-SHELL features an ergonomic design with a modern look. Its volume can be easily adjusted using the VCP plate, ensuring a custom fit for enhanced comfort and performance.

FLEXXI BE3

The new Flexxi Be3 technology allows for a better transfer of force to the ball of the foot, leading to improved control over vibrations and less stress on the knees, thighs and spine, and thus on the entire body. Due to the Flexxi 's composition, the foot is kept in motion, maintaining the heat inside the boot.

X-SHELL

The X-Shell of the alpine boot features a wider last that can be adjusted for volume using the VCP system, allowing for a personalized fit. Molded from a single piece, the X-Shell offers durability and structural support. A built-in seal at the overlap effectively prevents water from entering, keeping your feet dry in all conditions. This shell design ensures comfort, protection, and a precise fit for enhanced skiing performance

DUO-SHELL

The DUO Shell is designed to offer stability and comfort for young skiers, adapting to their needs with its lightweight yet durable construction. It delivers proper control and protection, supporting safe and enjoyable skiing experiences.

EON SHELL

The kids' EON shell has a larger volume and softer plastic for added comfort and flexibility. The design allows for easy foot entry and simple fastening, making them perfect for young skiers and beginners.

ZOOM

The ZOOM cuff and shell are molded from a single piece of a bit softer material, providing easier flexibility and smoother bending. With one buckle and strap, the front part of the cuff leans forward for better control, while the back opens for easy entry. This design ensures a comfortable fit and is ideal for skiers looking for ease of use and flexibility.

BUCKLES

E-STAP

The E-Strap combines a 4-buckle system with a power strap for enhanced adaptability. This unique design allows for greater adjustment to the C3 cuff design, accommodating a variety of calf sizes and shapes. The E-Strap ensures a secure, tailored fit while providing excellent support and stability, especially for skiers with wider calves, enhancing comfort and performance on the slopes

MICRO

The MICRO buckle provides precise fit adjustments with a simple turn of the buckle. This fine-tuning systemallows for small, incremental changes to achieve an optimal fit around the foot and leg. The MICRO buckle is perfect for those who need precision and control, delivering a snug, customized fit without sacrificing comfort or ease of use.

MACRO

The MACRO buckle offers versatile adjustability, with two options: a traditional strap or a movable ratchet system. This flexibility allows skiers to easily fine-tune the fit around the boot, ensuring a secure and comfortable hold. Its sturdy design is built for durability and reliability, making it ideal for skiers who require quick adjustments during performance.

OUTSOLES

GRIP WALK

Enhanced Walking Comfort and Traction

GRIP WALK is a ski boot sole technology featuring a rockered profile and high-traction rubber tread. Designed for improved walking comfort and superior grip, it offers enhanced stability and ease of movement on diverse surfaces.

OPTIGRIP

The heel and toe plates are made from durable, firm PU material and can be easily replaced with new ones if damaged, ensuring long-lasting use. The sole's carefully designed profile provides a safe step and helps prevent children from slipping or falling.

GRIP WALK OPTION

Upgrade with GRIP WALK Soles

Enhance your ski boots with GRIP WALK soles, available for separate purchase. Easily attachable, this technology features a rockered profile and high-traction rubber tread for improved walking comfort, grip, and stability on various surfaces.

ALPINA OUTSOLE

The standard alpine boot sole is designed according to the DH ISO 5355 standard, ensuring compatibility with most downhill ski bindings. This durable sole offers reliable grip and stability, providing optimal power transfer and control on the slopes, making it a trusted choice for downhill skiing.

COMFORT ALPINE

LINERS

A-FIT

Experience unmatched comfort with Alpina's A-Fit Custom Fit Technology. By heating the boot liners and molding them to your feet, you get a ski boot that fits like a glove. This quick molding process guarantees support and stability tailored to your unique foot shape.

ECO LINER

The inner boot features seams for added protection, compactness, and insulation. It has a roomier fit, with neoprene over the toes for warmth and a better general feel and water resistance. The extra foam in the heel provides added comfort, while the full inner lining ensures improved insulation and overall comfort.

ECO-M LINER

The ECO-M liner is crafted using a four-layer sandwich construction, laminated for optimal performance. The outer layer is tougher and more rigid, offering durability and protection. The middle layer provides both insulation and comfort, ensuring warmth and cushioning. Additional memory foam padding in the heel enhances grip and comfort, while the soft inner lining provides a cozy, warm feel for all-day comfort on the slopes.

X-FIT LINER

The X-FIT inner boot features a fur-lined interior for warmth and comfort, a strong strap for easy carrying, and three-layer foam for added softness, insulation, and support. The rubber-coated insole ensures better foot stability and sole protection, making X-FIT the perfect balance of comfort and performance

DUO FIT LINER

The DUO-Fit inner boot is specially designed for kids, offering a lightweight build for easy wear and movement. Its soft, warm liner ensures a cozy fit, while the adaptable design provides maximum comfort. With easy maintenance, DUO-Fit is the perfect combination of practicality and warmth for young adventurers.

EON-FIT LINER

The EON kids' boots feature a two-part inner boot, with the back section integrated into the back cuff for easier entry and a snug fit. The soft, warm liner ensures comfort, making these boots perfect for keeping little feet cozy and supported.

INSULATIONS

THINSULATE

Superior Thinsulate Insulation for Footwear
Thinsulate insulation offers up to twice the thermal comfort of standard materials, ensuring optimal warmth for your feet even in icy and humid conditions

ALPINA IGLOO

Enhanced Thermal Protection with Felt Insulation
Our footwear features advanced use of premium felt insulation, tailored for extreme weather conditions. This high-quality material provides unparalleled thermal comfort, safeguarding your feet against the cold.

EON
fun and easy

Anatomically shaped shell ensures the perfect position of the foot.

Lightweight construction provides superb comfort all day long.

GRIP WALK

Designed with superior materials and a pronounced profile, this ergonomic sole provides excellent grip even on slippery surfaces and makes walking in ski boots easier and more natural.

BUCKLE UP IN NO TIME

Our easy-to-use buckle system is kid-friendly, extremely reliable and guarantees a perfect fit.

EASY ON SYSTEM

Wide opening makes it easy to get in and out of the boot, giving your kids the chance to do it all by themselves.
